

Solution: 21-5-3.3 - MK - 003

Given:  $D = 60 \text{ kg}$   
 $\theta = 40^\circ$

Find:  $T_{BC}$   
 $T_{BA}$

$$D = (60 \text{ kg}) \times (9.81 \text{ m/s}^2) = 588.6 \text{ N}$$

$$\sum F_x = T_{ABx} - T_{BCx} = \left(\frac{4}{5}\right) T_{AB} - T_{BC} \cos(40^\circ)$$

$$\textcircled{1} \quad T_{AB} = \frac{T_{BC} \cos(40^\circ)}{\left(\frac{4}{5}\right)}$$

$$\sum F_y = T_{AB_y} + T_{BC_y} - D = \left(\frac{3}{5}\right) T_{AB} + T_{BC} \sin(40^\circ) - 588.6 \text{ N} \quad \textcircled{2}$$

$\textcircled{1} \rightarrow \textcircled{2}$

$$0 = \frac{3}{5} \left(\frac{5}{4}\right) T_{BC} \cos(40^\circ) + T_{BC} \sin(40^\circ) - 588.6 \text{ N}$$

$$0 = \frac{3}{4} T_{BC} \cos(40^\circ) + T_{BC} \sin(40^\circ) - 588.6 \text{ N}$$

$$T_{BC} \cdot \left(\frac{3}{4} \cos(40^\circ) + \sin(40^\circ)\right) = 588.6 \text{ N}$$

$$T_{BC} = \frac{588.6 \text{ N}}{\left(\frac{3}{4}\right) \cos(40^\circ) + \sin(40^\circ)} = 483.52 \text{ N}$$

$$T_{BC} = 483.52 \text{ N}$$

$$T_{BA} = \frac{T_{BC} \cos 40^\circ}{4/5} = \frac{483.52 \cos 40^\circ}{4/5} = 463.00 \text{ N}$$

$$T_{BA} = 463.00 \text{ N}$$

Check

$$\sum F_y = \frac{3}{5} (463.00 \text{ N}) + (483.52 \text{ N}) \sin(40^\circ) - 588.6 \text{ N}$$

$$\sum F_y = 0$$
